PROFILE

Senior Engineering Executive with 22+ years of experience in leading and building high-performance engineering organizations. Proven track record of inspiring cross-functional teams, in executing technical strategies aligned with business goals, while using driving Agile methodology. Demonstrated expertise in application development, image visualization, regulatory compliance and for scaling engineering teams from inception. A people leader, who fosters innovation, operational excellence and continuous improvement in complex, regulated environments.

KEY COMPETENCE

- Strategic Planning & Road mapping
- Financial Management, cost performance
- Digital Transformation
- Program & Operations Leadership
- Vendor & Partner Management
- People Leadership & Performance
- New leadership Development
- Technical Excellence
- Systems Engineering
- Software development

TECHNICAL SKILLS

- Digital Transformation
- Java | Microservices | REST APIs
- Azure | AWS | EDGE
- Agile Methodologies (SAFe, Scrum)
- Regulatory Submissions (FDA, IEC, SFDA, 510K)
- CI/CD Pipelines | DevSecOps | GitOps – Automated delivery.
- Tools: Jenkins, SonarQube, Artifactory, Kubernetes, Docker

PROFESSIONAL EXPERIENCE

State Street, Bangalore

Vice President – Platform Software Engineering

Feb 2023 – Present

- Established a 40+ member global platform engineering team from scratch, leading full lifecycle delivery of a strategic software platform impacting 100+ enterprise apps.
- Drove the implementation of first ever composable Enterprise Foundation Platform(EFF) that now hosts Unified Cloud onboarding, Data Fabric & Developer experience services.
- Setup & drove the multiple year program - Nucleus owning multiyear roadmap, defining & delivery of OKRs, performance metrics aligning them overall Org level strategic vision & goals.

- Oversaw architecture, product scoping, stakeholder alignment and funding acquisition & overseeing the budget planning & reporting for Platforms Org.
- EFF/Nucleus now hosts 10+ applications through -
 - Developer Productivity Platform, that unifies & provides a single pane to operate across a multitude of workflows/capabilities (20+) needed for developer & application onboarding & life cycle management at the firm.
 - Data Fabric, a Databricks based low code platform with an integrated orchestration and transformation engines along with observability. Currently hosting multiple apps for Responsible AI Observability, Hadoop Retirement & SDLC tool integrations.
 - Enterprise Patterns, Backstage based patterns hub introduced 30+ fully automated reusable patterns to the firm. Saved over 2500+ developer days across 25+ teams so far.
- Championed establishing and driving Agile development practices, enforcing engineering rigor and continuous delivery pipelines.

GE Healthcare, Bangalore

Various technical & leadership roles

Mar 2004 – Feb 2023

Director – Edison & Imaging DevOps

- **Led CI/CD & DevSecOps transformation** across Imaging and Digital verticals, enabling automated software delivery to customer devices.
- **Built & scaled a global team** from scratch of 50+ engineers across India, China & France in 1 year.
- 35,000+ build/release workflows were automated enabling 1,500+ global developers.

Senior Manager – Cloud & Coreload Platforms

- **Led Agile teams** in delivering AutoView, the first cloud-native multi modality medical image viewer using microservices, Spring, and REST APIs
- **Delivered Cloud Object Store** for advanced visualization platform on HealthCloud, CloudAV, using microservices architecture & Java.
- **Migrated legacy CI/CD framework** from US to India, replacing outdated tools with modern DevOps solutions

Systems Leader – MRI Clinical Applications

- **Drove new product development (NPI)** for a C++ based 4D Medical Imaging platform on MR scanners and AW workstations, translating clinical needs into global products with regulatory submissions (510K, IEC, CFDA).
- **Lead Systems Designer** for Advanced apps on MR, owning integration of inhouse built & third party advanced visualization apps onto MR scanners & AW workstations, collaborating with marketing, quality & regulatory ensuring team was well aligned to meet commercial, quality & program goals.
- **Installed Base Leader** responsible for effectively driving closure of customer/field issues, working closely across engineering, QA/RA, Complaint Handling teams & with multiple customer sites ensuring customer issues get prioritized and addressed timely while being fully complaint & audit readiness on DHF & CAPA documentation.

Software Engineer – AW Clinical Applications

- Actively contributed to full product development cycle for **Dynamic VUE, CardiacVUE, Motion VUE & Volume Viewer** application development for PET/CT , CT scanners and AW workstations, engaging from prototyping, requirement collection, design, verification & validation to final deployment & Installed Base support.
- Worked with global cross functional teams & pilot sites during these product development stages collaborating with marketing, UI Design and R&D teams in product definition & road-map realization.
- Engaged in establishing linkages with key customers like Michigan State University, Mayo Clinic, Bangalore Institute of Oncology, across US, Europe and India to explore opportunities for collaboration. Actively participated in customer site visits, installation, first level support & feedback collection.

EDUCATION

- MBA, Xavier Labor Research Institute (XLRI), Jamshedpur
- M.S. in Medical Software, Manipal University
- B.Tech in Biomedical Engineering, JNTU

KEY ACHIEVEMENTS

- Patent Award, for successful submission of disclosure on PET Cardiology at GE on standardized normal database having anatomical phase information. (US 20090257628)
- Lead Presenter in the first GE Healthcare's Global Technology Symposium held in, Milwaukee, WI.
- XLRI Gold Medal, for topping XLRI's MBA (PGCBM-20) batch.
